Gas Transmission

NTS Entry & Exit Capacity

Frequently Asked Questions

Welcome to our Gas Transmission NTS Entry and Exit Capacity Frequently Asked Questions document.

Here we provide information relating to our gas capacity arrangements to support you in purchasing Entry and Exit capacity. We have considered what questions our customers are likely to have in relation to capacity, including auctions processes and timings, reports, charges and more.

We hope that you find this document useful. Please feel free to contact us if you need any further information or if you have any feedback on this document.

Capacity Auctions and Products

How do I book Entry / Exit Capacity?

To book Entry or Exit capacity for UK points, the Gemini system is required. A shipper will need to have an account set up before being able to participate in any UK auction; long or short-term. If you are not already a registered shipper, please contact: xoserve.customer.lifecycle.team@xoserve.com.

To book capacity for Interconnector Points (IPs), then the PRISMA system will be required. A shipper will need to ensure they are registered and set up before being able to participate in any IP auction. If you are not already a registered shipper with PRISMA, please visit their website where you will find information on how to register: <https://platform.prisma-capacity.eu/#/register>.

What Entry and Exit Daily Auctions are there, and when do they run?

There are 3 daily auctions for both Entry and Exit and can be broadly defined as:

Entry

Day Ahead System Entry Capacity (DADSEC) – requests can be submitted in the entry Gemini system from D-7 05:00 up until D-1 01:00 and will be allocated at one of the following allocation windows: D-1 14:00, 17:00 or 01:00.

Within Day Daily System Entry Capacity (WDDSEC) – requests can be submitted in the entry Gemini system from D-1 02:00 up until D-0 02:00 and will be allocated between D-0 05:00 and D-1 02:30.

Daily Interruptible System Entry Capacity (DISEC) – requests can be submitted in the entry Gemini system from D-7 05:00 to D-1 13:00 and will be allocated between D-1 13:01 and D-1 15:00.

Exit

Day Ahead Daily Exit Capacity (DADNEX) – requests can be submitted in the exit Gemini system from D-7 05:00 up until D-1 14:00 and will be allocated at D-1 between 15:00 and 16:00.

Within Day Daily Exit Capacity (WDDNEX) – requests can be submitted in the exit Gemini system from D-1 14:00 to D0 02:00 and will be allocated at D0 06:30 to D0 02:30.

Daily Off-Peak Exit Capacity (DONEX) – requests can be submitted in the exit Gemini system from D-7 05:00 to D-1 14:00 and will be allocated between D-1 15:00 and D-1 16:00.

Is there an auctions calendar?

We do not have a published calendar online as specific auction dates are determined throughout the year. However, we do have documentation that outlines in which months the long-term firm capacity auctions are run, and further information about the auctions themselves. You will also receive an auction invitation letter for all our long-term capacity auctions before the auctions open generally the month before, if you are registered as a shipper, outlining the specific dates of the auction and the processes involved and how to participate. Our short-term auction dates are also detailed within the documentation, however these run daily and so do not come with an invitation letter.

Please ensure that all your contact details are up to date so that National Gas can contact you via our ANS (Active Notification System) to notify you of upcoming auctions. If contact details do change and need to be updated these can be sent to: capacityauctions@nationalgas.com.

For more auction information, please refer to our Gas Transmission Capacity Guidelines document available on our [Capacity website](#) page.

Is there an Interconnection Points (IP) auctions calendar?

The auction dates for all IP auctions are published via the European Network of Transmission System Operators for Gas (ENTSOG) website. National Gas does not provide this data or send out any invitation letters for the IP auctions.

Is it possible to book capacity weekly?

Firm Entry GB capacity is offered on a weekly basis in the Weekly System Entry Capacity (WSEC) auction, which starts on a Monday and ends on a Sunday. The Bid Window for this auction opens on D-10 08:00 – 17:00, and allocations take place on D-9 09:00 to D-8 17:00. Once allocated, the results can be seen in the sold/unsold report for Gemini Users, and in the Entry Capacity Availability Report (NORD07a) for non-Gemini users.

Any unsold product remaining after the WSEC allocation will roll into the Day Ahead (DADSEC) auction.

The introduction of the weekly auction in May 2022 has resulted in a change to the timetable of the Rolling Monthly auctions;

- The Rolling Monthly Surrender (RMTISSEC) window will take place on the last Business Day of every calendar month with the invitation for this Surrender window issued out two Business days prior to the window opening.
- The Rolling Monthly Trade and Transfer System Entry Capacity (RMTNTSEC) auction window will take place on the seventh Business Day of every calendar month.
- Allocations will be no later than the 10th Business Day of each month.

Exit capacity does not have the same provisions as Entry capacity and, is not offered weekly.

Is it possible to book capacity monthly?

Monthly Entry capacity can be purchased in the rolling monthly auctions that run every month. The bid window is in the month prior to the month that the capacity is for. There are two parts in this auction. The first part, Rolling Monthly (Trade Initiation) Surrender Process (RMTISSEC) is made up of a surrender of capacity, where customers may offer to surrender the capacity they hold, for one month, at a location, and at a price they choose. The second part, Rolling Monthly Transfer and Trade System Entry Capacity (RMTNTSEC) consists of shippers being invited to purchase capacity.

Capacity is allocated at the lowest price first, therefore if there is surrendered capacity offered at a lower price than the reserve price, that will be allocated first.

There is also the Annual Monthly System Entry Capacity (AMSEC) auction which is held in February where a shipper can book long term strips of monthly capacity from April Y+1 to September Y+2

More information on this auction can be found in our Gas Transmission Capacity Guidelines document available on our [Capacity website](#) page.

Exit capacity does not have the same provisions as Entry capacity and, is not offered monthly.

Interconnector Point monthly capacity can be booked via the IP Rolling Monthly auctions for both Exit (IPRMNEX) and Entry (IPRMSEC). These run every month selling capacity via PRISMA for the following month only.

How is Off-peak / Interruptible capacity made available? How much can be made available and when?

The quantity of off-peak or interruptible capacity made available can change on a day-by-day basis. The quantity made available depends on how much firm capacity has already been sold, and how much of that sold firm capacity has been used (Use It Or Lose It (UIOLI) concept).

The release of Daily Interruptible System Entry Capacity (DISEC) is determined by the Entry Capacity Release (ECR) Methodology Statement and is also stated within the Uniform Network Code (UNC) – see [Transportation Principal Document](#) B2.5.10 and B2.5.11. The amount of DISEC released on a day is determined by utilisation of Firm capacity in a 30-day rolling period, ending on D-7. This is often referred to as the Use-It-Or-Lose-It (UIOLI) quantity. Since 1st October 2021 there has been a higher utilisation of Firm products, and therefore a decrease in the amount of DISEC being released. The determination for how much DISEC to release has not changed since 1st October 2021; the calculation is automated in Gemini to reflect the ECR MS.

In addition to the calculated UIOLI amount of DISEC released on a day, we can make available an additional amount of DISEC on a discretionary basis. We will consider making additional DISEC capacity available where there is evidence that the current offering of Firm and Interruptible capacity combined is insufficient for meeting market capacity needs. Consideration will also be given to network capability and the prevailing operational view.

What is the process of application for enduring increase in Exit capacity?

Enduring capacity is that which remains until it is reduced or withdrawn. A customer can purchase an enduring increase of exit capacity in the EAFLEC (Enduring annual flat exit capacity) auction. This bid window allows for a capacity start date of Y+4 to Y+6 with an application period for the month of July and allocation before the 30th of September.

Are there any fees associated with the enduring increase application?

The fees associated with increasing your capacity within the annual enduring exit auctions is the amount of capacity you are now entitled to flow against. It is also worth noting that any increase may be subject to User Commitment.

The same applies to the decrease (or reduction) auction, where you are only decreasing the capacity and therefore payments you are liable for.

How can we book capacity (ideally long-term) on the National Gas network?

To book gas capacity on the National Gas (NGG) transmission network you must first be registered as a shipper on the Gemini system, with contacts details provided for our emergency contact list.

If you wish to book capacity at any of the three Interconnection Points, you will require access to PRISMA. PRISMA is the European platform for capacity bookings.

Once the above is in place you shall be able to place bids in the capacity auctions. Please note that only those bidding at IPs will need access to PRISMA. These auctions run throughout the gas year, with several different auctions facilitating long- or short-term capacity, as described earlier. To find out more about the types of auctions please refer to our Gas Transmission Capacity Guidelines document available on our [Capacity website](#) page.

What are the rules in relation to allocation of daily firm and daily interruptible capacity?

Within day auctions are allocated at various times throughout the day (see the Entry & Exit Capacity webpages for more information). Dependent on when the bid is received will depend on when the bid is allocated. Should National Gas receive a bid that exceeds the remaining unallocated amount, the bid may only be partially allocated.

Traditionally, bids are ranked in order of bid price. Those who bid the highest will win the right to the bid capacity over those who bid at the reserve price for example.

Should multiple shippers bid for capacity at the same bid price, and the amount of capacity applied for exceeds the remaining unallocated amount, the remaining unallocated capacity will be allocated pro rata the amount originally bid.

For example:

Location A remaining unallocated capacity available = 400,000 kWh.

Shipper 1 requests 250,000 kWh of capacity at location A.

Shipper 2 requests 500,000 kWh of capacity at location A.

Total request of 750,000 kWh at location A.

Both shippers have entered bids at the reserve price of 0.0717.

Based on the 400,000 kWh that remains unsold, and the bid quantity of Shippers 1 & 2, the amount allocated to each will be as follows:

Shipper 1 will be allocated 132,000 kWh (33% of remaining unallocated capacity)

Shipper 2 will be allocated 256,000 kWh (64% of remaining unallocated capacity)

For more information regarding the process of allocation, please refer to Uniform Network Code (UNC) – see [Transportation Principal Document](#), B2.7.2.

Why hasn't my bid been accepted? Why have I only partially received the amount of capacity I bid for?

The normal bidding process in the UK auctions is 'pay as bid', whereby there is a reserve price but the highest bid for capacity will be allocated as a priority until all capacity has been sold. If there are

remaining bids that are of a lower value remaining after all available capacity has been sold, these bids will either be rejected or, at National Gas' discretion, further capacity may be released. In the event of partial allocation, if there isn't enough capacity to satisfy all bids, bids will be pro-rated between all the parties, with the highest bids allocated in full until all capacity is sold.

Can I sell unwanted capacity I have purchased?

If you have capacity that you wish to surrender within the entry capacity regime you can do so through the Rolling Monthly Trade Initiation Surrender System Entry Capacity (RMTISSEC) auction which occurs each month. Please be aware that unless the surrendered capacity is taken up by another shipper, i.e. bid for, then the capacity will remain with the original holder/shipper.

Within the exit regime a customer can opt to decrease their capacity in the Enduring Annual Exit (flat) Capacity decrease (EAFLEC) auction window which runs from 1st to 15th July.

There is a further option to assign or transfer capacity to a second party, which is covered below under the "Assignments and transfers" section.

Can I surrender capacity at an IP?

If a Shipper has excess capacity, it can be surrendered back to the TSO.

For more information relating to this process, please follow this link: [How To Surrender Capacity? : PRISMA Capacity Platform \(prisma-capacity.eu\)](#).

Reports and Results

Where can I find allocation results from an auction?

The results of an Entry capacity auction can be found in Gemini, by navigating to: Deal>Bid Capture Reports>Bid Information. For an Exit auction, the file path is as follows: Deal>Capture>Capture Requests.

Allocation results are also published on our Market Information Provision Initiative (MIPI) website, Report Explorer that will allow you to see an aggregate view of auctions results: <http://mip-prod-web.azurewebsites.net/>

You can also view the amount of capacity that has been sold and remains unsold via the Long-term Summary reports. These are accessed via the same link.

Please note if there was no capacity sold then the fields and prices will be blank in these reports. Furthermore, we cannot provide individual customers' sales as this is commercially sensitive information.

Where can I find information relating to what capacity is available within-day, at any given location, and what capacity has already been allocated?

For Gemini users, this information can be found in the Sold/Unsold reports in Gemini.

- Entry: Product > Publish Reports > MoS Results > Sold/Unsold report
- Exit: Publish > Reports > MOS Reports > Post Allocation Information Report > Sold/Unsold report

For those who do not have access to Gemini, similar kinds of information can be found in the Long-Term Summary reports available on our website. However, please note that these reports only consider what has been sold and what quantity remains available following the long-term auctions.

They do not consider what has since been sold in the short-term auctions. The links and menu options required are provided below.

Entry: <https://data.nationalgas.com/reports/capacity>

Auction Type: Long Term Summary

Report Type: Summary Report

Exit: <https://data.nationalgas.com/reports/capacity>

Report Type: Long Term Summary

Report Type: Summary Report

Overruns

How are overrun charges calculated?

If a shipper flows more gas onto or off the network than they are entitled to (e.g. in excess of their capacity rights) they will be charged as per the Uniform Network Code [Transportation Principal Document](#), section B 2.13 for Entry capacity and B3.13 for Exit capacity.

These charges are a calculation based on the difference between the flow of physical gas and the capacity rights of the customer. It will also include the price paid for the capacity and a multiplier. Historically, the system used 8 times the highest price paid for both Entry and Exit capacity.

However, as of 1st October 2020, this changed to 3 times the highest price paid on Entry and, 6 times the highest price paid on Exit.

Assignments and transfers

Can I assign my capacity at an NTS Exit Point to another user at the same location?

Shippers can assign all or some of their capacity rights at an NTS Exit Point to another shipper at the same location. The shipper must notify National Gas no later than 5 days prior to the assignment. Both Users must match the assignment. An assignment is deemed to be approved if either it is approved by National Gas, or if National Gas does not approve, via the Gemini system within 4 days. The shippers' holdings are adjusted accordingly. The shipper being assigned the rights becomes liable for all associated payments and obligations.

As part of the Gemini "Spring Release 2022" project, a shipper can now assign all or part of their holdings. The type of capacity can also be selected as either Annual Yearly or Enduring. Further information can be found on the [Xoserve website](#).

The recently published Gas Transmission Charges do not include any indication of the Revenue Recovery Charge (RRC).

The Transmission RRC is the mechanism to manage the consequences of under or over recovery of revenues from the Transmission Services Capacity Charges. As such, at the time of setting the Reserve Prices, the Transmission Revenue Recovery Charge for both Entry and Exit is Zero. Should

this change within the Gas year, then the relevant Transmission RRC at Entry or Exit would be formally notified to the industry in advance of any charge being applied.

In what system can I assign IP capacity?

The table below illustrates in what system capacity can be assigned:

	Gemini	PRISMA
Unbundled	YES, only if purchased in IPAYNEX auction	NO
Bundled	NO	NO

What are my options should I want to reduce the amount of annual or enduring capacity that I hold?

National Gas holds an Enduring Annual Exit (flat) Capacity (EAFLEC) auction in July every year, whereby users can submit decrease requests subject to user commitment.

Can Capacity be transferred?

Capacity can either be transferred or re-assigned.

Transferring capacity allows a customer to partially or fully give a second party capacity that they hold, however the transferring party retains the obligation to that capacity. The length of time this agreement is active for is decided by the users. For UK locations, this must be completed in Gemini, however across the Interconnection Points this is completed in PRISMA.

Capacity Charges

Is capacity purchased prior to 6th April 2017 but transferred after this date, still classed as legacy capacity?

No – the transferred capacity would not be classed as legacy as it was traded post April 2017 and therefore, would be subject to additional charges such as the Revenue Recovery Charge (RRC). This is covered in more detail under section 3.26 of the UNC Modification document, as detailed above.

What is the Conditional Discount for Avoiding Inefficient Bypass of the NTS? (This was previously known as the Shorthaul tariff)

Managing inefficient bypass within the charging framework is a means to offer a charging arrangement specifically for directly connected NTS Users located at, or near, Entry Points where construction of a pipeline to bypass the NTS may be a commercially viable option.

In June 2020, National Gas raised UNC 0728 that proposed a new charging product for managing inefficient bypass of the NTS. On 27 April 2021 Ofgem issued a [decision to implement](#) UNC Modification 0728B on 01 October 2021.

[Transportation Principal Document](#) Section B, section “9. Conditional NTS Capacity Charge Discount” also provides details of what these charges are.

If you have any further queries, please contact the Charging Team at box.NTSGasCharges@nationalgas.com

Why is there only one Bacton Exit point now as opposed to two?

Ofgem approval of UNC Modification 0785, which came into effect on gas day 1st March 2022, saw the two Bacton Exit points - BactonINT & BactonBBLINT combined to create one aggregated point known as Bacton (Exit) IP.

For more information, please click [here](#) to view the change pack.
