

# E1 Network Gas Supply Emergency Procedure

## Version Change Review Log

### December 2025 | Version 13

### Introduction

This report concerns the annual review of the E1 Network Gas Supply Emergency Procedure (E1). The version of the E1 subjected to review was version 12.1.

The review identified five areas where amendments to E1 were required. These are described below:

Section Requiring Amendment		Description of Amendment
Section Number	Section Title	
2.5	NGSE COMMUNICATIONS	Fig. 2 has been amended to include NTS VLDMCs, Network Entry Facilities, Gas Networks Ireland, and NESO.
4.1.3	EMERGENCY SPECIFICATION GAS	Removed lower Wobbe limit from fig. 5 gas quality specification.
4.2.6	PRIORITY CUSTOMERS	Updated figure 10 (load shedding hierarchy) with clearer text and brief definitions of Priority Customers within the diagram.
-	GLOSSARY	Amended description of NESO to be more reflective of current role. Amended from <i>"A new organisation founded on the current activities and capabilities of the Electricity System Operator, but also taking on new roles with a whole system perspective across energy vectors"</i> to <i>"The National Energy System Operator (NESO) is the independent, publicly owned body responsible for overseeing the UK's electricity and gas systems. It ensures secure, reliable, and efficient energy delivery while supporting the transition to net zero through strategic planning and coordination of energy infrastructure."</i>
ALL	-	Data classification ('Official – For public release') added to all pages.

### Results of review

These amendments shall be incorporated into version 13 (issued December 2025).
