

## GAS AVAILABILITY STATUS (GAS) REPORT

National Gas is currently experiencing a shortage of gas which could potentially affect security of gas and electricity supplies. To avert a potential network gas supply emergency, National Gas needs to better understand gas availability from the offshore supply and LNG sector over the next 48 hours to determine the balance between gas and electricity supply and demand.

This situation has been discussed with the NSTA, whose agreement has been received to request this information from the UK gas terminal operators.

Please therefore *urgently* complete the information requested below and issue to National Gas with a copy to the NSTA (see Section 4 below for return contact details).

Date:	Time:
-------	-------

### 1. Terminal information *(please complete one form for each sub-terminal)*

Terminal:	Operator:
Contact Name: (for queries):	
Telephone no:	Fax no:
Mobile no:	E-mail address:

### 2. Forecast aggregate maximum production availability to National Gas NTS

Provide a forecast of maximum gas availability taking account of any production constraints and ignoring nominations: This is the maximum possible volume for this gas day and the next gas day. Also provide details of any additional gas conforming to Schedule 3 Part II of GS(M)R your facility may have. (Wobbe Number Upper Limit > 52.85 MJ/m<sup>3</sup> Lower Limit < 46.5 MJ/m<sup>3</sup> ICF (Incomplete Combustion Factor) ≤ 1.49)

	This gas day	Next gas day	
Current End of Day amount nominations Rate			mcm/d
Maximum potential delivery rate of gas to NTS (GS(M)R schedule 3 part 1)			mcm/d
How long would it take to get to maximum delivery rate?			minutes
Earliest additional flow time?			Time
Maximum potential delivery rate of gas to NTS (GS(M)R schedule 3 part 2)			mcm/d

### 3. Additional information

*This space is available to submit any additional information that you feel would be of benefit to National Gas and the NSTA at the present time.*

### 4. Distribution
